

Reloading Costs

The calculator is setup to work with the number of [components](#) you bought at a given price. We have found that dividing your brass cost by the number of times you plan to reload it helps give a more accurate representation of your reloading costs. Many of our competition shooters use a formula of dividing by 10 but you may feel free to use whatever factor you feel is most appropriate for the type of shooting that you do. If you get your brass or any other component for "free" just put in .01 for the cost.
