

Weighing In

At [Dillon Precision](#) we realize just how important weights are to the home reloader. The weight of your powder charge is critical. Weighing your projectiles is a really good idea too. Some people even weigh the empty cases and the loaded rounds. Whichever weights you find yourself checking you'll want a scale that is accurate, reliable, repeatable, and easy to use. The Dillon Precision [D-Terminator Electronic Scale](#) meets all of these criteria and more. If you are using an old, or outdated scale try making the move to a digital scale and you'll find that load development and component verification are MUCH easier.
